

COMP1047 – Computer Networks – Lab 4

Lab 4: Analyzing Wireless Networks

The objective of this practical lab activity is to become familiar with the analysis of the performance of a network system via simulations. In this Lab, in the first quarter you will continue the previous work and analyze the results obtained by simulations. Later on, you need to run the wireless topologies and obtain the trace files. After getting the trace files you need to analyse the trace files using AWK scripts.

You will be provided with the following files

- [ns-simple-trace.tcl](#), [wireless.tcl](#), and [performance.tcl](#)

In this lab, you need to generate the wireless trace and analyze it. You need to write AWK and Shell script for trace analysis.

Here is an example of wireless trace generated from the above wireless.tcl file.

```
1 M 0.0 nn 4 x 670 y 670 rp AODV
2 M 0.0 sc ./scen-3-test cp ./cbr-3-test seed 0.0

```

You need to generate the new trace file format shown below and its explanation is available [here](#). You only need to use the command

#new tracef file

\$ns_ use-newtrace

```
